# Get Started With... Flexible Pacing

## Start at the End

Identify a learning or skill goal. **Plan\_backwards from the goal:** identify the learning experiences (lessons, activities, formative assessments, etc.) that students need to practice to master those goals. Make sure to set pacing parameters or boundaries! Template: <u>Backwards Planning</u>.

## Classify Lessons

Decide which activities are **essential** and should be required, which are useful for additional **practice** or asking students to apply understanding in a new way, and which are **extensions** and allow students to pursue interests or to deepen their understanding. Template: <u>Lesson Classifications</u>.

## Ditch the Podium

Make <u>teacher-created instructional videos</u>: avoid whole class lectures, replicate yourself, and make your instruction available on demand.

### Choose and Track

Set the stage for student agency, share learning paths and target dates, and encourage students to self-monitor. Template: <u>Playlists and Progress Trackers</u>.

#### Make Groups Work

Embed collaboration in daily routines: discussions of larger themes, review of isolated skills, openers and closers, peer feedback and small group workshopping. Encourage a culture of spontaneous, organic collaboration. Plan ahead and set dates for whole class activities: labs, seminars, debates, etc.
